# Configuring the BIOS

We now need to configure the BIOS of the server motherboard.

You can do this via a keyboard and monitor attached to the server or through IPMI as outlined in a previous section.

The settings and screen shots are all taken from a Supermicro X10SRH-CLN4F, but most are applicable to most server motherboards (I would imagine).

## Getting Into Your BIOS

### BIOS Settings

### Quiet Boot

### Watch Dog Function

### AES-NI Encryption

### AHCI SATA Configuration

### IPMI Configuration

### Boot Order Configuration
